

HIGH GROVE & THE DROVES

High Grove Solar Farm and **The Droves Solar Farm** are two separate projects, being developed by **RWE** and **Island Green Power (IGP)** respectively.

The Droves Solar Farm would provide 500MW of clean energy and is proposed to be located on land north of Swaffham and south of Castle Acre. At present, there is a small section of overlap between the southernmost area of The Droves Site Boundary and High Grove's Underground Cable Corridor.

We are in regular contact with IGP and are working together to assess the cumulative effects of the two projects. This includes exploring opportunities to deliver community benefits in partnership. By working collaboratively, we can broaden the scope of these initiatives and maximise their positive impact on local communities and the surrounding area.

Both projects are at the pre-application stage and are conducting separate public consultations in 2025. We encourage anyone with an interest in either proposal to participate in both consultations and provide separate feedback for each project.

For further information on The Droves Solar Farm, please visit their project website at <https://drovessolarfarm.co.uk/>
